A voice identification system used by the Australian government for millions of people has a serious security flaw, a Guardian Australia investigation has found.

Centrelink and the Australian Taxation Office (ATO) both give people the option of using a "voiceprint", along with other information, to verify their identity over the phone, allowing them to then access sensitive information from their accounts.

### Meet Genmo, your new creative copilot

Genmo Chat is the first step towards our approach to Creative General Intelligence where a human and a generative model work together. Today, Genmo Chat can help you create and edit images and videos. Collaboration yields more creative and useful results than any Al alone.

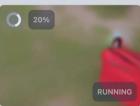

8. "Doc and Marty jumping for joy after fixing the DeLorean" Do you want to make any changes to these captions?

You: Let's end with a sunset

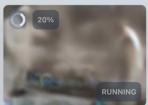

Genmo: Great! I'll replace the last caption with "The DeLorean driving into the sunset." Now, I'll dispatch requests to generate the first four video clips.

- text2video(caption="A cinematic shot from Back to the Future of Doc excitedly showing off his modified time-traveling DoorDash car to Marty captured with a Sony Alpha a7 III", aspectRatio="3:2", loop=false)
- text2video(caption="A vibrant red food delivery bag", aspect lo="3:2", loop=false)
- text2video(caption="Travelling through a wormhole with vibrant colors and stars", aspectRatio="3:2", loop=false)
- text2video(caption="Doc and Marty delivering food to Abe Lincoln using time travel", aspectRatio="3:2", loop=false)

The underlying spirit in many debates about the pace of Al progress—that we need to take safety very seriously and proceed with caution—is key to our mission. We spent more than 6 months testing GPT-4 and making it even safer, and built it on years of alignment research that we pursued in anticipation of models like GPT-4.

We expect to continue to ramp our safety precautions more proactively than many of our users would like. Our general goal is for each model we ship to be our most aligned one yet, and it's been true so far from GPT-3 (initially deployed without any special alignment), GPT-3.5 (aligned enough to be deployed in ChatGPT), and now GPT-4 (performs much better on all of our safety metrics than GPT-3.5).

We believe (and have been saying in policy discussions with governments) that powerful training runs should be reported to governments, be accompanied by increasingly-sophisticated predictions of their capability and impact, and require best practices such as dangerous capability testing. We think governance of large-scale compute usage, safety standards, and regulation of/lesson-sharing from deployment are good ideas, but the details really matter and should adapt over time as the technology evolves. It's also important to address the whole spectrum of risks from present-day issues (e.g. preventing misuse or self-harm, mitigating bias) to longer-term existential ones.

Perhaps the most common theme from the long history of Al has been incorrect confident predictions from experts. One way to avoid unspotted prediction errors is for the technology in its current state to have early and frequent contact with reality as it is iteratively developed, tested, deployed, and all the while improved. And there are creative ideas people don't often discuss which can improve the safety landscape in surprising ways — for example, it's easy to create a continuum of incrementally-better Als (such as by deploying subsequent checkpoints of a given training run), which presents a safety opportunity very unlike our historical approach of infrequent major model upgrades.

The upcoming transformative technological change of AI is something that is simultaneously cause for optimism and concern — the whole range of emotions is justified and is shared by people within OpenAI, too. It's a special opportunity and obligation for us all to be alive at this time, to have a chance to design the future together.

Do you see OpenAI's master plan? App Store is just the beginning.

You all are writing tool integrations for the ultimate GPT - a single model that reads your doc, chains apps on the fly, and enacts change on the world.

The end game is just one - an Everything App. Coming soon.

This was 2011.

Marc Andreessen TECH

"Today, the world's largest bookseller, Amazon, is a software company — its core capability is its amazing software engine for selling virtually everything online, no retail stores necessary. On top of that, while Borders was thrashing in the throes of impending bankruptcy, Amazon rearranged its web site to promote its Kindle digital books over physical books for the first time. Now even the books themselves are software."

Interestingly, Andreessen also said the following:

Marc Andree

"I, along with others, have been arguing the other side of the case...We believe that many of the prominent new Internet companies are building real, high-growth, high-margin, highly defensible businesses."

### SpaceX Starship: launch of biggestever rocket ends with explosion

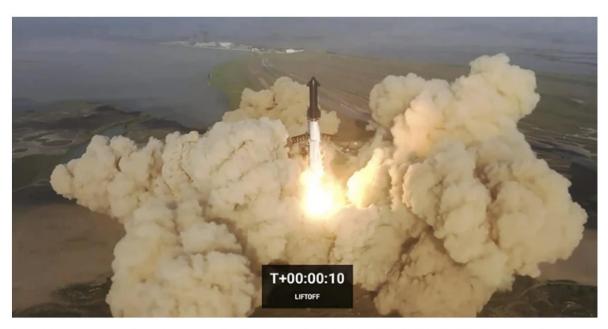

The SpaceX rocket made it partially through its first full test. It could change astrophysics and astronomy, as well as ferry people to the Moon and Mars.

#### Alexandra Witze

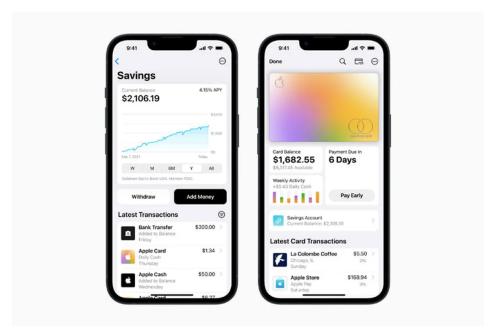

SpaceX wants to use Starship to colonize Mars. Credit: SPACEX HANDOUT/EPA-EFE/Shutterstock

The enormous Starship roared off a launch pad in southern Texas today and then exploded before it reached space, ending the first major test flight of the largest rocket ever built. Starship and its booster cleared the launch pad and soared to 39 kilometres high, then rotated out of control and blew up four minutes into flight, before the two could separate as planned.

## Apple's new savings account lets Card users grow their Daily Cash

/ Apple has launched its Cardlinked savings account that comes with a 4.15 percent APY.

By EMMA ROTH

Image: Apple

Apple is launching a new high-yield Savings account for Apple Card users. In a post shared on Monday, Apple says Card users can build upon their Daily Cash rewards by putting it in the company's new Goldman Sachs savings account that comes with a 4.15 annual percentage yield (APY).

Apple previously offered no way for users to grow their Daily Cash, the cashback rewards users get when using their Apple Card. But now users can stash their funds into a savings account, which comes with no minimum deposits and no minimum balance requirements. Users can set up the account through the Apple Card in their Wallet app, and
